Dear Colleagues

At the heart of science lies the power to transform how we understand and perceive the world around us. Over the past two decades, the field of neurosurgery has seen remarkable advancements, fundamentally reshaping how neurosurgical conditions are treated.

The Pan Arab Journal of Neurosurgery (PAJN) is committed to staying at the forefront of these scientific developments. Our journal covers a broad spectrum of topics within neurosurgery, including basic sciences, oncology, trauma, vascular and endovascular surgery, skull base disorders, epilepsy, functional and peripheral nerve surgery, endoscopy, spinal conditions, craniofacial anomalies, pediatric neurosurgery, and pain management. We believe the potential for growth and innovation in these areas is boundless.

Our mission is to establish PAJN as a leading platform for neurosurgical research, not only across Arab nations but globally. We aim to bridge the division between basic scientific research and clinical application by providing an accessible forum for researchers worldwide. Recognizing

the financial limitations often faced by scientists in developing countries, PAJN proudly offers a no-cost publication model to support authors everywhere, with a special focus on those from low-income regions.

With this issue, I am excited to celebrate with all of you our 100th publication in the PAJN since the relaunch. So far, we have published 101 articles, which have been downloaded nearly 22,400 times a testament to the reach and impact of the work we strive to promote. This issue has publications from Niger, India, United Kingdom, and Egypt.

I extend my heartfelt thanks to our editorial board and peer reviewers for their invaluable contributions over the past 54 months. Their dedication ensures the journal continues to thrive. I am also deeply grateful to our authors and readers across the globe for their continued trust and engagement with PAJN.

We remain committed to delivering high-quality, impactful research to the global neurosurgical community and will continue to support and showcase the voices of scientists from the Arab world and beyond through the PAJN.
